No change.

D. Loan-Backed Securities

1. Prepayment assumptions are generally obtained using a model provided by a third-party vendor.

2. Not applicable.

3. Not applicable.

4. Not applicable.

5. The Company reviews all loan-backed and structured securities in which the fair value of the given security is less than the amortized cost to determine if a given security is other-than-temporarily impaired. The Company examines characteristics of the underlying collateral, such as delinquency and default rates, the quality of the underlying borrower, the type of collateral in the pool, the vintage year of the collateral, subordination levels within the structure of the collateral pool, the quality of any credit guarantors, to determine the cash flows expected to be received for the security.

If the severity and duration of the security's unrealized loss indicates a risk of an other-than-temporary impairment, the Company will evaluate if the amortized cost basis of the security will be recovered by comparing the present value of the cash flows expected to be received for the given security with the amortized cost basis of the security. If the present value of cash flows is greater than the amortized cost basis of a security then the security is deemed other-than-temporarily impaired.

E. Repurchase Agreements

No change.

Note 20 – Fair Value Measurements

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value measurements are based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources while unobservable inputs reflect the Company's view of market assumptions in the absence of observable market information. The Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. In determining fair value, the Company uses various methods including market, income and cost approaches.

The Company categorizes its assets and liabilities measured and reported at fair value in the quarterly statement into a three-level hierarchy based on the priority of the inputs to the valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement of the instrument in its entirety.

The fair value hierarchy levels are as follows:

Level 1. Unadjusted quoted prices accessible in active markets for identical assets or liabilities at the measurement date.

Level 2. Unadjusted quoted prices for similar assets or liabilities in active markets or inputs (other than quoted prices) that are observable or that are derived principally from or corroborated by observable market data through correlation or other means.

Level 3. Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. Inputs reflect management's best estimate about the assumptions market participants would use at the measurement date in pricing the asset or liability. Consideration is given to the risk inherent in both the method of valuation and the valuation inputs.

The Company periodically reviews its fair value hierarchy classifications for financial assets and liabilities. Changes in observability of significant valuation inputs identified during these reviews may trigger reclassifications. Reclassifications into/out of the fair value hierarchy levels are reported as transfers at the beginning of the period in which the change occurs.

For bonds and marketable stocks for which market quotations are available, the Company generally uses independent pricing services to assist in determining the fair value measurement.

The Company's investments in corporate debt securities, mortgage-backed securities and other asset-backed securities are valued with the assistance of independent pricing services and non-binding broker quotes. The Company's policy is to give priority to pricing obtained from our primary independent pricing service. In the event that pricing information is not available from an independent pricing service, non-binding broker quotes are used to assist in the valuation of the investments. In many cases, only one broker quote is available. The Company's policy is generally not to adjust the values obtained from brokers.

Broker quotes are considered unobservable inputs as only one broker quote is ordinarily obtained, the investment is not traded on an exchange, the pricing is not available to other entities and/or the transaction volume in the same or similar investments has decreased such that generally only one quotation is available. As the brokers often do not provide the necessary transparency into their quotes and methodologies, the Company periodically performs reviews and tests to ensure that quotes are a reasonable estimate of the investments fair value.

For investments valued with the assistance of independent pricing services, the Company obtains the pricing services' methodologies, inputs and assumptions and classifies these investments accordingly in the fair value hierarchy. The Company periodically reviews and tests the pricing and related methodologies obtained from these independent pricing services against secondary sources to ensure that management can validate the investment's fair value and related fair value hierarchy categorization. If large variances are observed between the price obtained from the independent pricing services and secondary sources, the Company analyzes the causes driving the variance.

NOTES TO FINANCIAL STATEMENTS

For certain bonds not priced by independent services (e.g., private placement securities without quoted market prices) a corporate pricing matrix or internally developed pricing model is most often used. The corporate pricing matrix is developed using private spreads for corporate securities with varying weighted average lives and credit quality ratings. The weighted average life and credit quality rating of a bond to be priced using the corporate pricing matrix are important inputs into the model and are used to determine a corresponding spread that is added to the appropriate U.S. Treasury yield to create an estimated market yield for that security. The estimated market yield and other relevant factors are then used to estimate the fair value of the particular bond.

No assets or liabilities were carried at fair value as of March 31, 2011.
