20. Fair Value Measurements

The Company's financial assets carried at fair value have been classified, for disclosure purposes, based on a hierarchy. The hierarchy gives the highest ranking to fair values determined using unadjusted quoted prices in active markets for identical assets (Level 1) and the lowest ranking to fair values determined using methodologies and models with unobservable inputs (Level 3). An asset's classification is based on the lowest level input that is significant to its measurement. For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level 3). The levels of the fair value hierarchy are as follows:

Level 1: Observable inputs that reflect quoted prices for identical assets or liabilities in active markets that the company has the ability to access at the measurement date. Level 1 securities include highly liquid U.S. Treasury securities, money market funds, certain mortgage-backed securities, and exchange traded equity and derivative securities.

Level 2: Quoted prices in markets that are not active or significant inputs that are observable either directly or indirectly. Level 2 inputs include the following:

a. Quoted prices for similar assets or liabilities in active markets;
b. Quoted prices for identical or similar assets or liabilities in non-active markets;

NOTES TO FINANCIAL STATEMENTS

c. Inputs other than quoted market prices that are observable;
d. Inputs that are derived principally from or corroborated by observable market data through correlation or other means.

Level 3: Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. These reflect management's own judgments about the assumptions a market participant would use in pricing the asset or liability.
