20. **FAIR VALUE MEASUREMENTS**  
SSAP 100, Fair Value Measurements, establishes a framework for measuring fair value. That framework provides a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value. The three levels of the fair value hierarchy are described as follows:
- Level 1 – inputs to the valuation methodology are unadjusted quoted prices for identical assets or liabilities in active markets that the Union has the ability to access.  
Level 2 – inputs to the valuation methodology include quoted prices for similar assets or liabilities in active markets; quoted prices for identical or similar assets or liabilities in inactive markets; inputs other than quoted prices that are observable; or inputs that are derived principally from or corroborated by observable market data by correlation or other means.  
Level 3 – inputs to the valuation methodology are unobservable and significant to the fair value measurement.
- The fair value measurement level within the fair value hierarchy is based on the lowest level of any input that is significant to the fair value measurement. The Union believes its valuation methods are appropriate and consistent with other market participants. The use of different methodologies or assumptions to determine the fair value of certain financial instruments could result in a different fair value measurement at the reporting date.
- The Union is in the process of implementing these fair value measurements.
