20. Fair Value Measurements

A. Input used for assets measured and reported at Fair Value.

1. Items measured and reported at Fair Value by levels 1, 2, and 3

Certain financial instruments are periodically measured at fair value on a nonrecurring basis, such as when impaired, or for certain bonds when carried at the lower of cost or fair value.

The fair value of an asset is the amount at which that asset could be bought or sold in a current transaction between willing parties that is other than in a forced or liquidation sale. The fair value of a liability is the amount at which that liability could be incurred or settled in a current transaction between willing parties.

Fair values are based on quoted market prices when available. When market prices are not available, fair value is generally estimated using discounted cash flow analyses, incorporation of current market inputs for similar financial instruments with comparable terms and credit quality (matrix pricing). In instances where there is little or no market activity for the same or similar instruments, the Company estimates fair value using methods, models, and assumptions that management believes market participants would use to determine a current transaction price. These valuation techniques involve some level of management estimation and judgment, which becomes

NOTES TO FINANCIAL STATEMENTS

significant with increasingly complex instruments or pricing models. Where appropriate, adjustments are included to reflect the risk inherent in a particular methodology model or input used.

The Company's financial assets and liabilities carried at fair value have been classified, for disclosure purposes, based on a hierarchy. The hierarchy gives the highest ranking to fair values determined using unadjusted quoted prices in active markets for identical assets and liabilities (Level 1) and the lowest ranking to fair values determined using methodologies and models with unobservable inputs (Level 3). An asset's or liability's classification is based on the lowest level input that is significant to its measurement. For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level 3). The levels of the fair value hierarchy are as follows:

Level 1 – Values are unadjusted quoted prices for identical assets and liabilities in active markets accessible at the measurement date.

Level 2 – Inputs include quoted prices for similar assets or liabilities in active markets, quoted prices from those willing to trade in markets that are not active, or other inputs that are observable or can be corroborated by market data for the term of the instrument. Such inputs include market interest rates and volatilities, spreads, and yield curves.

Level 3 – Certain inputs are unobservable (supported by little or no market activity) and significant to the fair value measurement. Unobservable inputs reflect the Company's best estimate of what hypothetical market participants would use to determine a transaction price for the asset or liability at the reporting date.

Assets Measured at Fair Value

Certain financial assets are measured at fair value, such as certain bonds valued at the lower of cost or fair value, or investments that are impaired during the reporting period and recorded at fair value on the balance sheet at September 30. The following table summarizes assets measured at fair value:

Bonds measured at fair value are those bonds that were determined to be other-than-temporarily impaired at December 31 and bonds valued at the lower of cost or fair value at September 30. NAIC 3 – 6 rated bonds are valued at the lower of cost or market. The Company does not have any investment commitments at September 30, 2013.

3. Policy on Transfers into and out of Level 3

At the end of each reporting period, the Company evaluates whether or not any event has occurred or circumstances have changed that would cause an instrument to be transferred into or out of Level 3. During the current year, no transfers into or out of Level 3 were required.

4. Inputs and techniques used for level 2 and level 3 Fair Values

Bonds carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations as quoted markets prices for similar instruments in an active market were utilized. This was accomplished by the use of matrix pricing. Matrix pricing takes quoted prices of bonds with similar features and applies analytic methods to determine the fair value of bonds held. Features that are inputs into the analysis include duration, credit quality, tax status and call and sinking fund features.

Common stocks categorized as Level 3 had key unobservable inputs. Also, the investment is less liquid, and there is limited trading activity. The use of independent non-binding broker quotations to value investments generally indicates there is a lack of liquidity or the general lack of transparency in the process to develop the valuation estimates generally causing these investments to be classified in Level 3.
