B. Use of Estimates in the Preparation of the Financial Statements

The preparation of financial statements in conformity with Statutory Accounting Principles requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses. It also requires disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the period. Actual results could differ from those estimates.

C. Accounting Policy

Premiums are earned over the terms of the related insurance policies. Unearned premium reserves are established to cover the unexpired portion of premiums written. Such reserves are computed by pro rata methods for direct business.

Expenses incurred in connection with acquiring new insurance business, including such acquisition costs as sales commissions, are charged to operations as incurred. Expenses incurred are reduced for ceding allowances received or receivable.

- (1) Investments in short-term bonds rated "1" (highest quality), or "2" (high quality) by the Securities Valuation Office ("SVO") of the NAIC are reported in the financial statements at amortized cost. Bonds rated "3" (medium quality), "4" (low quality), "5" (lower quality), or "6" (lowest quality) by the SVO are reported at the lower of amortized cost or fair value. The interest method is used to amortize any purchase premium or discount, including estimates of future prepayments obtained from independent sources. Money market mutual funds are recorded at amortized cost, which approximates fair market value.
- (2) Investments in bonds rated "1" (highest quality), or "2" (high quality) by the Securities Valuation Office ("SVO") of the NAIC are reported in the financial statements at amortized cost. Bonds rated "3" (medium quality), "4" (low quality), "5" (lower quality), or "6" (lowest quality) by the SVO are reported at the lower of amortized cost or fair value. Investments in commercial mortgage backed securities (CMBS) and non-agency residential mortgage backed securities (RMBS) utilize a two step process to obtain a valuation and rating in accordance with SSAP 43R, Loan Backed and Structured Securities. The first step derives a rating for valuation by comparing the current amortized cost to the modeled range of values assigned to the six NAIC designations for each security. This determines whether the securities are stated at the lower of amortized cost or fair value per the above rules. The second step utilizes the same modeled range of values to derive a rating for reporting using the current carrying value as determined in the first step.

Ratings and valuations for investments in asset backed securities, loan backed securities, and structured securities (other than Equipment Trust Certificates and Credit Tenant Leases) that are otherwise rated by a credit rating provider (CRP) are calculated using a two step process. The first step derives a rating for valuation based on the CRP rating and the NAIC model valuation table. The second step utilizes the model valuation table to derive a rating for reporting using the current carrying value as determined in the first step. Securities whose initial rating is NAIC 1 or NAIC 6 in step one are not further modified by step two. The interest method is used to amortize any purchase premium or discount, including estimates of future prepayments obtained from independent sources.

20. Fair Value Measurements.

A. (1) The following summarizes the Company's financial assets carried at fair value as of March 31, 2014.

NOTES TO FINANCIAL STATEMENTS

<u>Description</u>	<u>Level 1</u>	<u>Level 2</u>	<u>Level 3</u>	<u>Total</u>
Assets at fair value				
Short-term investments	2,389,538	-	-	2,389,538
Total	<u>2,389,538</u>	=	=	<u>2,389,538</u>

There were no material transfers between Levels 1 and 2 during the first quarter of 2014.

- (2) The Company held no Level 3 assets as of March 31, 2014.
- (3) There were no material transfers into or out of Level 3 during the first quarter of 2014.
- (4) The Financial assets recorded on the Balance Sheet at fair value are categorized based on the reliability of inputs to the valuation techniques as follows:

Level 1 Financial assets and financial liabilities whose values are based on unadjusted quoted prices for identical assets or liabilities in an active market that the Company can access.

Level 2 Financial assets and financial liabilities whose values are based on the following:
Quoted prices for similar assets or liabilities in active markets;
Quoted Prices for identical or similar assets or liabilities in non-active markets; or
Valuation models whose inputs are observable, directly or indirectly, for substantially the full term of the asset or liability.

Level 3 Financial assets and financial liabilities whose values are based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. These inputs may reflect the Company's estimates of the assumptions that market participants would use in valuing the financial assets and financial liabilities.

The availability of observable inputs varies by instrument. In situations where fair value is based on internally developed pricing models or inputs that are unobservable in the market, the determination of fair value requires more judgment. In many instances, inputs used to measure fair value fall into different levels of the fair value hierarchy. In those instances, for disclosure purposes, the level in the fair value hierarchy within which the fair value measurement is categorized is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

The fair value guidance establishes a hierarchy for inputs used in determining fair value that maximize the use of observable inputs and minimizes the use of unobservable inputs by requiring that observable inputs be used when available.

Fair value is a market-based measure considered from the perspective of a market participant who owns an asset. Accordingly, when market observable data is not readily available, the Company's own assumptions are set to reflect those that market participants would be presumed to use in pricing the asset at the measurement date. The Company uses prices and inputs that are current as of the measurement date, including during periods of market disruption. In periods of market disruption, the ability to observe prices and inputs may be reduced for many instruments. This condition could cause an instrument to be reclassified from Level 1 to Level 2 or from Level 2 to Level 3.

When available, the Company uses the market approach to estimate the fair value of its financial instruments, which is based on quoted prices in active markets that are readily and regularly available. Generally, these are the most liquid of the Company's holdings and valuation of these securities does not involve management judgment. Matrix pricing and other similar techniques are other examples of the market approach.

When quoted prices in active markets are not available, the Company uses the income approach, or a combination of the market and income approaches, to estimate the fair value of its financial instruments. The income approach involves using discounted cash flow and other standard valuation methodologies. The inputs in applying these market standard valuation methodologies include, but are not limited to interest rates, benchmark yields, bid/ask spreads, dealer quotes, liquidity, term to maturity, estimated future cash flows, credit risk and default projections, collateral performance, deal and tranche attributes, and general market data.

The following valuation techniques and inputs were used to estimate the fair value of each class of significant financial instruments:

Level 1 Measurements

Short-term Investments: Comprised of actively traded money market funds that have daily quoted net asset values for identical assets that the Company can access.

The Company held no Level 2 or Level 3 securities carried at fair value as of March 31, 2014.

B. Not applicable.

C. Valuation, Methods, and Assumptions.

- (1) The following table summarizes the fair value of the Company's financial assets as of March 31, 2014.

Bonds	24,414,365	23,972,102	1,013,600	23,400,765	-	-
Short-Term Investments	2,389,538	2,389,538	2,389,538	-	-	-

- (2) The following valuation methods and assumptions were used to measure the fair values of each type of financial asset and liability:

NOTES TO FINANCIAL STATEMENTS

Bonds: The fair value of Level 1 bonds, consisting of U.S. Treasury Notes, is determined using unadjusted quoted prices in an active market. The majority of the Company's Level 2 bonds are valued using the market and income approaches by the SVO or by leading, nationally recognized providers of market data and analytics if no SVO price is available. When available, recent trades of identical or similar assets are used to price these securities. However because many fixed income securities do not actively trade on a daily basis, pricing models are often used to determine security prices. The pricing models discount future cash flows at estimated market interest rates. These rates are derived by calculating the appropriate spreads over comparable U.S. Treasury securities based on credit quality, industry, and structure of the asset. Observable inputs used by the models include benchmark yields, bid/ask spreads, dealer quotes, liquidity, term to maturity, credit risk and default projections, collateral performance, deal and tranche attributes, and general market data. Inputs may vary depending on type of security.

Short-Term Investments: Valuation methods and assumptions for Level 1 money market funds are discussed in Note 20.A.4.

25. Change in Incurred Losses and Loss Adjustment Expenses

Loss & lae reserves as of December 31, 2013 were \$8,313,000. As of March 31, 2014, \$2,642,000 has been paid for incurred loss & lae expenses attributable to insured events or prior years. Reserves remaining for prior years are now \$5,573,000 as a result of re-estimation of unpaid claims and lae expenses. Therefore, there has been a \$98,000 favorable prior year development from 12/31/2013 to 03/31/2014 principally on liability lines of business.

Year-end 2013 reserves held steady at March 31st. Slight reductions in ultimate losses were seen in liability, physical damage and pip coverages. Accident years 2010 and 2011 developed slightly unfavorably in the first quarter of 2014, but these amounts were more than offset by favorable development in accident years 2012 and 2013, where payments are coming in as expected and case reserve development is better than expected.

The development is generally the result of an ongoing analysis of recent loss development trends and are increased or decreased as additional information becomes known regarding individual claims. The Company has no retrospectively rated policies that are subject to premium adjustments.
