In addition, the Company uses the following accounting policies:

The methods for making such estimates are continually reviewed and any adjustments are reflected in the period determined.
- (12) The Company has not modified its capitalization policy during the current reporting period.
- (13) The Company does not have pharmaceutical rebate receivables.

**20. FAIR VALUE MEASUREMENTS**

A. Valuation, Techniques, and Inputs

1. The following summarizes the Company's financial assets measured at fair value as of September 30, 2014.

Description for each class of asset or liability	(Level 1)	(Level 2)	(Level 3)	Total
a. Assets at fair value				
Short-term Investments	\$ 625,392	\$ -	\$ -	\$ 625,392
Total assets at fair value	\$ 625,392	\$ -	\$ -	\$ 625,392

There were no material transfers between Levels 1 and 2 during the first nine months of 2014.

2. The Company held no Level 3 assets as of September 30, 2014.

3. There were no material transfers into or out of Level 3 during the first nine months of 2014.

4. The Financial assets and financial liabilities recorded on the Balance Sheet at fair value are categorized based on the reliability of inputs to the valuation techniques as follows:

*Level 1* Financial assets and financial liabilities whose values are based on unadjusted quoted prices for identical assets or liabilities in an active market that the Company can access.

*Level 2* Financial assets and financial liabilities whose values are based on the following:  
Quoted prices for similar assets or liabilities in active markets;  
Quoted prices for identical or similar assets or liabilities in non-active markets; or  
Valuation models whose inputs are observable, directly or indirectly, for substantially the full term of the asset or liability.

*Level 3* Financial assets and financial liabilities whose values are based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. These inputs may reflect the Company's estimates of the assumptions that market participants would use in valuing the financial assets and financial liabilities.

The availability of observable inputs varies by instrument. In situations where fair value is based on internally developed pricing models or inputs that are unobservable in the market, the determination of fair value requires more judgment. In many instances, inputs used to measure fair value fall into different levels of the fair value hierarchy. In those instances, for disclosure purposes, the level in the fair value hierarchy within which the fair value measurement is categorized is determined based on the lowest level input that is significant to the fair value measurement in its entirety.

The fair value guidance establishes a hierarchy for inputs used in determining fair value that maximize the use of observable inputs and minimizes the use of unobservable inputs by requiring that observable inputs be used when available.

Fair value is a market-based measure considered from the perspective of a market participant who owns an asset or owes a liability. Accordingly, when market observable data is not readily available, the Company's own assumptions are set to reflect those that market participants would be presumed to use in pricing the asset or liability at the measurement date. The Company uses prices and inputs that are current as of the measurement date, including during periods of market disruption. In periods of market disruption, the ability to observe prices and inputs may be reduced for many instruments. This condition could cause an instrument to be reclassified from Level 1 to Level 2 or from Level 2 to Level 3.

When available, the Company uses the market approach to estimate the fair value of its financial instruments, which is based on quoted prices in active markets that are readily and regularly available. Generally, these are the most liquid of the Company's holdings and valuation of these securities does not involve management judgment. Matrix pricing and other similar techniques are other examples of the market approach.

## Notes to Financial Statement

When quoted prices in active markets are not available, the Company uses the income approach, or a combination of the market and income approaches, to estimate the fair value of its financial instruments. The income approach involves using discounted cash flow and other standard valuation methodologies. The inputs in applying these market standard valuation methodologies include, but are not limited to interest rates, benchmark yields, bid/ask spreads, dealer quotes, liquidity, term to maturity, estimated future cash flows, credit risk and default projections, collateral performance, deal and tranche attributes, and general market data.

The following valuation techniques and inputs were used to estimate the fair value of each class of significant financial instruments:

### Level 1 Measurements

Short-term Investments: Comprised of actively traded money market funds that have daily quoted net asset values for identical assets that the Company can access.

The Company held no Level 2 or Level 3 fair value securities as of September 30, 2014.

C. Valuation, Methods, and Assumptions

1. The following summarizes the fair value of the Company's financial assets as of September 30, 2014:

Type of Financial Instrument	Aggregate Fair Value	Admitted Assets	(Level 1)	(Level 2)	(Level 3)	Not Practicable (Carrying Value)
Bonds	\$ 7,621,011	\$ 7,007,324	\$ 383,141	\$7,237,870	\$ -	\$ -
Short-term Investments	\$ 625,392	\$ 625,392	\$ 625,392	\$ -	\$ -	\$ -

2. The following valuation methods and assumptions were used to measure the fair values of each type of financial asset and financial liability:

Bonds: The fair value of Level 1 bonds, consisting of U.S. Treasury Notes, is determined using unadjusted quoted prices in an active market. The majority of the Company's Level 2 bonds are valued using the market and income approaches by leading, nationally recognized providers of market data and analytics. When available, recent trades of identical or similar assets are used to price these securities. However, because many fixed income securities do not actively trade on a daily basis, pricing models are often used to determine security prices. The pricing models discount future cash flows at estimated market interest rates. These rates are derived by calculating the appropriate spreads over comparable U.S. Treasury securities based on credit quality, industry, and structure of the asset. Observable inputs used by the models include benchmark yields, bid/ask spreads, dealer quotes, liquidity, term to maturity, credit risk and default projections, collateral performance, deal and tranche attributes, and general market data. Inputs may vary depending on type of security.

Short-term Investments: Valuation methods and assumptions are discussed in Note 20.A.4.

D. Not applicable
