If the current year results in a reported loss for the insurance company, the tax credit recorded is currently payable from the parent company to the insurance company. - The Company classifies the assets and liabilities that require measurement of fair value on a recurring basis based on the priority of the observable and market-based sources of data into a three-level fair value hierarchy. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). The three levels of the fair value hierarchy are as follows:
- Level 1 – Valuations based on quoted prices in active markets for identical assets or liabilities that the entity has the ability to access.
- Level 2 – Valuations based on significant other observable inputs other than those included in Level 1, such as quoted prices for similar assets or liabilities, quoted prices in markets that are not active, or other inputs that are observable or can be corroborated by observable data for substantially the full term of the assets or liabilities.
- Level 3 – Valuations based on unobservable inputs such as when observable inputs are not available or inputs that are supported by little or no market activity and that are significant to the fair value of the assets or liabilities. The Company has no assets or liabilities measured at fair value in this category.

For securities whose prices are not available through pricing services or index providers, the prices are obtained from other sources such as broker-dealers or pricing vendors. Debt instruments are valued by index providers, pricing services or broker-dealers using standard market conventions. The market conventions utilize market quotations, market transactions in comparable instruments and various relationships between instruments such as yield to maturity, dollar prices and spread prices in determining value.
