1. Anticipated prepayments for loan-backed and structured securities are used to determine the effective yield of an issue at purchase. Changes in the estimated cash flows of the issue are incorporated when determining the statement value at the end of each quarter and year-end. The Company calculates prepayment speeds for fixed-rate agency mortgage-backed securities utilizing Mortgage Industry Advisory Corporation (MIAC) Mortgage Industry Medians (MIMs). MIMs are derived from a semi-monthly dealer-consensus survey of long-term prepayment projections. For other mortgage-backed, loan-backed, and structured securities, the Company utilizes prepayment assumptions from Moody's Analytics. Moody's applies a flat economic credit model and utilizes a vector of multiple monthly speeds as opposed to a single speed for more robust projections. In instances where Moody's projections are not available, the Company uses data from Reuters, which utilizes the median prepayment speed from contributors' models. These assumptions are consistent with the current interest rate and economic environment. The retrospective scientific method is used to value most loan-backed and structured securities. For structured securities deemed to be high-risk, meaning the Company might not recover substantially all of its recorded investment due to unanticipated prepayment events, changes in investment yields due to changes in estimated future cash flows are accounted for on a prospective basis.

2. The Company has the following recognized other-than-temporary impairments on loan-backed securities:

None

3. Securities, by CUSIP, with a recognized other-than-temporary impairment, currently held by the reporting entity, as the present value of cash flows expected to be collected is less than the amortized cost basis of the securities:

#### 20. Fair Value Measurements

##### A. Input used for assets measured and reported at Fair Value

###### 1. Items measured and reported at Fair Value by levels 1, 2, and 3

Statutory accounting principles define the fair value of a financial instrument as the amount at which that asset could be bought or sold in a current transaction between willing parties that is other than in a forced or liquidation sale. The fair value of a liability is the amount at which that liability could be incurred or settled in a current transaction between willing parties. Certain financial instruments and all nonfinancial instruments are excluded from statutory disclosure requirements. Therefore, the aggregate fair value amounts presented below do not represent the underlying fair value of the Company.

Fair values are based on quoted market prices when available. When market prices are not available, fair value is generally estimated using discounted cash flow analyses, incorporation of current market inputs for similar financial instruments with comparable terms and credit quality (matrix pricing). In instances where there is little or no market activity for the same or similar instruments, the Company estimates fair value using methods, models, and assumptions that management believes market participants would use to determine a current transaction price. These valuation techniques involve some level of management estimation and judgment, which becomes significant with increasingly complex instruments or pricing models. Where appropriate, adjustments are included to reflect the risk inherent in a particular methodology model or input used.

The Company's financial assets and liabilities carried at fair value have been classified, for disclosure purposes, based on a hierarchy as defined by SSAP No. 100, Fair Value Measurements. The hierarchy gives the highest ranking to fair values determined using unadjusted quoted prices in active markets for identical assets and liabilities (Level 1) and the lowest ranking to fair values determined using methodologies and models with unobservable inputs (Level 3). An asset's or liability's classification is based on the lowest level input that is significant to its measurement. For example, a Level 3 fair value measurement may include inputs that are both observable (Levels 1 and 2) and unobservable (Level 3).

The levels of the fair value hierarchy are as follows:

*Level 1* – Management's valuations are unadjusted quoted prices for identical, unrestricted assets and liabilities in active markets accessible at the measurement date. Since valuations are based on quoted prices that are readily available in an active market, valuation of these assets does not involve any meaningful degree of judgment. An active market is defined as a market where transactions for the financial instrument occur with sufficient frequency and volume to provide pricing information on an ongoing basis. Level 1 financial assets and liabilities generally include common stocks and U.S. government debt securities, where management's valuations are based on quoted market prices.

*Level 2* – Management's valuations are based on quoted prices where such markets are not deemed to be sufficiently "active." In such circumstances, additional valuations metrics will be used, which involve direct or indirect observable market inputs. Level 2 financial assets and liabilities generally include debt securities other than debt issued by the U.S. government. Inputs include quoted prices for similar assets or liabilities in active markets, quoted prices from those willing to trade in markets that are not active, or other inputs that are observable or can be corroborated by market data for the term of the instrument. Such inputs include market interest rates and volatilities, spreads, and yield curves.

*Level 3* – Management's valuations are based on inputs that are unobservable (supported by little or no market activity) and significant to the fair value measurement. Valuations under Level 3 generally involve a significant degree of judgment on the part of management.

**3. Policy on Transfers into and out of Level 3**

At the end of each reporting period, the Company evaluates whether or not any event has occurred or circumstances have changed that would cause an instrument to be transferred into or out of Level 3. During the current year, no transfers into or out of Level 3 were required.

**4. Inputs and techniques used for level 2 and level 3 Fair Values**

Bonds carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations as quoted markets prices for similar instruments in an active market were utilized. This was accomplished by the use of matrix pricing. Matrix pricing takes quoted prices of bonds with similar features and applies analytic methods to determine the fair value of bonds held. Features that are inputs into the analysis include duration, credit quality, tax status and call and sinking fund features.

Investments categorized as Level 3 had key unobservable inputs. Also, the investments are less liquid, and there is limited trading activity. The use of independent non-binding broker quotations to value investments generally indicates there is a lack of liquidity or the general lack of transparency in the process to develop the valuation estimates generally causing these investments to be classified in Level 3.

In 2012 PLIC and BCSIC, the direct insurer, implemented a continuity credit program for the professional liability policyholders. The continuity credit program is a mechanism to reward the policyholders for their continued participation in the program. BCSIC issued a rider to the 2012 professional liability policies, which granted a continuity credit of 40% of 2012 premium on primary coverage and 20% of 2012 premium on excess coverage. In 2013, upon the 2012 participating policy renewals a new rider was issued, granting an additional continuity credit. The amount of the continuity credit that could be paid to the policyholder in 2013 is equal to the total continuity credit balance earned in 2013. The remaining amount is carried forward into future years, and is forfeited if the policyholder decides not to renew. Pursuant to a reinsurance treaty between PLIC and BCSIC, PLIC is reinsuring BCSIC for the continuity credit. Per the reinsurance treaty, PLIC reimburses BCSIC only when BCSIC actually pays the continuity credit to the policyholder. In 2017, PLIC did not grant an additional continuity credit. As of June 30, 2017, PLIC has a continuity credit liability of \$642,945, which is reflected in aggregate write-ins for liabilities on page 3 of this Statement.

Pursuant to a reinsurance treaty between PLIC and BCSIC, PLIC agrees to reimburse BCSIC, the direct insurer, for any payments to third-party reinsurers of BCSIC greater than premiums actually collected to satisfy any guaranteed premiums required to be ceded to any reinsurer of BCSIC. In addition, PLIC agrees to accept liability for any uncollected reinsurance recoveries that BCSIC has unsuccessfully attempted to recover from third-party reinsurers on the business within the reinsurance agreement. PLIC further agrees to reimburse BCSIC for any adjustable premiums, loss corridors, and any other net retained risk. The intent of the reinsurance contract between BCSIC and PLIC is to have BCSIC bear no underwriting or other risk.
