A. Inputs Used for Assets and Liabilities Measured at Fair Value

- 1. Included in various investment related line items in the financial statements are certain financial instruments carried at fair value. Other financial instruments are periodically measured at fair value, such as when impaired, or, for certain fixed maturities and preferred stock, when carried at the lower of cost or market.

The fair value of an asset is the amount at which that asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. The Company does not have any material liabilities carried at fair value.

NOTES TO FINANCIAL STATEMENTS

The Company has categorized its financial instruments, based on the priority of the inputs to the valuation technique, into a three-level fair value hierarchy. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure the financial instruments fall within different levels of the hierarchy, the categorization is based on the lowest level that is significant to the fair value measurement of the instrument.

Financial assets that fall within Level 1 and Level 2 are priced according to observable data from identical or similar securities that have traded in the marketplace. Also within Level 2 are securities that are valued by outside services or brokers where the Company has evaluated the pricing methodology and determined that the inputs are observable. Financial assets that fall within Level 3 of the hierarchy are valued based upon unobservable market inputs. Pricing for each Level 3 security is based upon inputs that are market driven, including third-party reviews provided to the issuer or broker quotes. However, the Company places in the Level 3 hierarchy securities for which it is unable to obtain the pricing methodology or it could not consider the price provided as binding. Management ultimately determines the fair value for each Level 3 security that it considers to be the best exit price valuation.

The Company primarily bases fair value estimates for investments in equity and fixed-maturity securities on quoted market prices or on prices from a nationally recognized pricing vendor, an outside resource that supplies global securities pricing, dividend, corporate action and descriptive information to support fund pricing, securities operations, research and portfolio management. The Company obtains and reviews the pricing service's valuation methodologies and related inputs and validates these prices by replicating a sample across each asset class using a discounted cash flow model. When a price is not available from these sources, as in the case of securities that are not publicly traded, the Company determines the fair value using various inputs including quotes from independent brokers. In these circumstances, the Company has generally obtained and evaluated two nonbinding quotes from brokers; its investment professionals determine the best estimate of fair value. The fair value of investments not priced by a pricing vendor is less than 1 percent of the fair value of the Company's total investment portfolio.

Financial instruments are categorized based upon the following characteristics or inputs to the valuation techniques:

- Level 1—Financial assets and liabilities for which inputs are observable and are obtained from reliable quoted prices for identical assets or liabilities in active markets. This is the most reliable fair value measurement and includes, for example, active exchange-traded equity securities.
- Level 2 – Financial assets and liabilities for which values are based on quoted prices in markets that are not active or for which values are based on similar assets and liabilities that are actively traded. This also includes pricing models for which the inputs are corroborated by market data.
- The technique used for the Level 2 fixed-maturity securities is the application of market based modeling. The inputs used for all classes of fixed-maturity securities listed in the table below include relevant market information by asset class, trade activity of like securities, marketplace quotes, benchmark yields, spreads off benchmark yields, interest rates, U.S. Treasury or swap curves, yield to maturity and economic events. Level 2 fixed-maturity securities are primarily priced by a nationally recognized pricing vendor.
- Level 3—Financial assets and liabilities for which values are based on prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. Level 3 inputs include the following:
 - Quotes from brokers or other external sources that are not considered binding;
 - Quotes from brokers or other external sources where it cannot be determined that market participants would in fact transact for the asset or liability at the quoted price; or
 - Quotes from brokers or other external sources where the inputs are not deemed observable.

Reclassification of certain financial instruments may occur when input observability changes. Reclassifications are reported as transfers into/out of the Level 3 category.

The following table presents the Company's assets measured and reported at fair value by level within the fair value hierarchy as of September 30, 2018:

Assets at Fair Value:

	Level 1	Level 2	Level 3	Total	Net Asset Value (NAV) Included in Level 2
