These are adjusted using the prospective method.
- (7)

- (3) Policies when Transfers Between Levels are Recognized
Not applicable.
- (4) Description of Valuation Techniques and Inputs Used in Fair Value Measurement
Level 1 - This category includes securities valued at the lower of cost or fair value. The estimated fair values are based on quoted market prices in active markets and traded on an exchange.

Level 2 – This category includes common stock. Valuations are based upon quoted prices for similar instruments in active markets, quoted prices for identical or similar instruments in markets that are not active, and model-based valuation techniques for which all significant assumptions are observable in the market. Valuations are obtained from third-party pricing services or inputs that are observable or derived principally from or corroborated by observable market data.

Level 3 – This category includes 6 rated NAIC bonds. Valuations are generated from techniques that use significant assumptions not observable in the market. These unobservable assumptions reflect the Company's assumptions that market participants would use in pricing the asset or liability. Valuation techniques include the use of discounted cash flow models, spread-based models, and similar techniques, using the best information available in the circumstances.

- (5) Fair Value Disclosures
The Company did not have any derivatives as of the end of the reporting period.

The Company utilizes external independent third-party pricing services to determine its fair values on investments when available. In the event a price is not available from a third-party pricing service, the Company pursues external pricing from brokers. If a broker price is not available, the Company determines a fair value through various valuation techniques that may include discounted cash flows, spread-based models, or similar techniques, depending upon the specific security to be priced.

Fair value measurements for assets and liabilities where there exists limited or no observable market data are calculated using the Company's own estimates and are categorized as Level 3. These estimates are based on current interest rates, credit spreads, liquidity premium or discount, the economic and competitive environment, unique characteristics of the asset or liability, and other pertinent factors.
