## A. Fair Value Measurements

## (1) Fair Value Measurements at Reporting Date

The Company has categorized its assets and liabilities that are reported on the balance sheet at fair value into the three-level fair value hierarchy as reflected in the table below. The three-level fair value hierarchy is based on the degree of subjectivity inherent in the valuation method by which fair value was determined. The three levels are defined as follows.

- Level 1- Quoted prices in active markets for identical assets and liabilities: This category for items measured at fair value on a recurring basis includes exchange-trade stocks. The fair value of these stocks is based on quoted prices in active markets.
- Level 2- Significant observable inputs: The estimated fair values for some of these items are determined by independent pricing services using observable inputs. Others are based on quotes from markets which are not considered actively traded. This category for items measured at fair value on a recurring basis may include long term bonds.
- Level 3- Significant unobservable inputs: The estimated fair values for these items may be determined by various parties using methods that are not available to the Company, or that may be unavailable to the general public. This category for items measured at fair value on a recurring basis may include limited partnerships or other invested assets.
