- (2) Fair Value Measurements in (Level 3) of the Fair Value Hierarchy - Not Applicable
- (3) Policies when Transfers Between Levels are Recognized - NONE
- (4) Description of Valuation Techniques and Inputs Used in Fair Value Measurement  
Included in various investment related line items in the statutory financial statements are certain financial instruments carried at fair value. Other financial instruments are periodically measured at fair value, such as when impaired, or for certain bonds and preferred stock when carried at the lower of cost or market.

Fair Value Hierarchy: Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability (exit price) in an orderly transaction between market participants at the measurement date. In determining fair value, the Company uses various methods including market, income and cost approaches. The market approach utilizes prices and other relevant information generated by market transactions involving identical or comparable assets and liabilities. The income approach uses discounted cash flows to determine fair value. When applying either approach, the Company maximizes the use of observable inputs and minimizes the use of unobservable inputs. Observable inputs reflect the assumptions market participants would use in valuing a financial instrument based on market data obtained from sources independent of the Company. Unobservable inputs reflect the Company's estimates about the assumptions market participants would use in valuing financial assets and financial liabilities based on the best information available in circumstances.

The Company is required to categorize its assets and liabilities that are carried at estimated fair value on the statutory statements of admitted assets, liabilities, and capital and surplus into a three level hierarchy based on the priority of the inputs to the valuation technique in accordance with SSAP No. 100, Fair Value Measurements. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure estimated fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement. The levels of the fair value hierarchy are as follows:

- Level 1 – Fair value is based on unadjusted quoted prices for identical assets and liabilities in an active market at the measurement date. The types of assets and liabilities utilizing Level 1 valuations generally include cash and short-term investments, separate account assets and exchange traded derivatives.
- Level 2 – Fair value is based on significant inputs, other than quoted prices included in Level 1 that are observable in active markets or that are derived principally from or corroborated by observable market data through correlation or other means for identical or similar assets and liabilities. The types of assets and liabilities utilizing Level 2 valuations generally include U.S. government agency securities, municipal bonds, foreign government debt, certain corporate debt, asset-backed, mortgage-backed, and private placement securities, derivatives, common stocks, securities lending reinvested collateral and cash equivalent securities.
- Level 3 – Fair value is based on unobservable inputs for the asset or liability for which there is little or no market activity at the measurement date. Unobservable inputs used in the valuation reflect management's best estimate about the assumptions market participants would use to price the asset or liability. The types of assets and liabilities utilizing Level 3 valuations generally include certain corporate debt, asset-backed or mortgage-backed securities, and derivative securities.
