**NOTE 20 Fair Value Measurements**

## A.

## (1) Fair Value Measurements at Reporting Date

The Company has categorized its assets and liabilities that are reported on the balance sheet at fair value into the three-level fair value hierarchy as reflected in the table below. The three-level fair value hierarchy is based on the degree of subjectivity inherent in the valuation method by which fair value was determined. The three levels are defined as follows:

Level 1 - Quoted prices in active markets for identical assets and liabilities: This category is for items measured at fair value on a recurring basis includes exchange-trade stocks. The fair value of these stocks is based on quoted prices in active markets.

Level 2 Significant observable inputs: The estimated fair values for some of these items are determined by independent pricing services using observable inputs. Others are based on quotes from markets which are not considered actively traded. This category is for items measured at fair value on a recurring basis may include long term bonds.

Level 3 - Significant unobservable inputs: The estimated fair values for these items may be determined by various parties using methods that are not available to the Company, or that may be unavailable to the general public. This category is for items measured at fair value on a recurring basis may include limited partnerships or other invested assets.

## (1) Fair Value Measurements at Reporting Date

Description for each class of asset or liability	(Level 1)	(Level 2)	(Level 3)	Net Asset Value (NAV)	Total
a. Assets at fair value					
Bonds	\$ 23,130,077	\$ 1,598,878			\$ 24,728,955
Cash and Cash Equivalents	\$ 935,139				\$ 935,139
<b>Total assets at fair value/NAV</b>	<b>\$ 24,065,216</b>	<b>\$ 1,598,878</b>	<b>\$ -</b>	<b>\$ -</b>	<b>\$ 25,664,094</b>

## (2) Fair Value Measurements in (Level 3) of the Fair Value hierarchy- None

## (3) Policies when Transfers Between Levels are Recognized- None

## (4) Description of Valuation Techniques and Inputs Used in Fair Value Measurement

Bonds carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations as quoted market prices for similar instruments in an active market were utilized. This was accomplished by the use of matrix pricing. Matrix pricing takes quoted prices of bonds with similar features and applies analytic methods to determine the fair value of bonds held. Features that are inputs into the analysis include duration, credit quality, tax status and call and sinking fund features.

Preferred stocks carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations because either quoted markets prices for similar instruments in an active market were utilized via matrix pricing as described above or because quoted markets prices for identical instruments trading in an inactive market were utilized.

Common stocks carried at fair value categorized as Level 2 were valued using a market approach. These valuations were determined to be Level 2 valuations because of quoted markets prices for identical instruments trading in an inactive market were utilized. When an equity instrument is illiquid due to limited trading activity, the use of quoted markets prices for identical instruments was determined by the Company to be the most reliable method to determine fair value.
