NLIC and NLAIC apply a prescribed practice that utilizes certain alternative derivative and reserve accounting practices for eligible derivative instruments and indexed products, respectively, in order to better align the measurement of indexed product reserves and the derivatives that hedge them. NLIC and NLAIC applied the prescribed practice to their derivative instruments hedging fixed annuity and indexed universal life insurance products and fixed annuity reserve liabilities effective January 1, 2021. The prescribed practice changed the subsidiaries' valuation by \$12.4 million and \$(12.2) million as of December 31, 2022 and December 31, 2021, respectively.

#### B. Use of Estimates in the Preparation of the Financial Statements

The preparation of statutory financial statements in conformity with Statutory Accounting Principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities. It also requires disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenue and expenses during the period. Actual results could differ from those estimates.

#### C. Accounting Policies

**Federal Income Taxes.** The Company files its own consolidated returns with its subsidiary, Retention Alternatives, Ltd. The Company provides for federal income taxes based on amounts the Company believes it ultimately will owe. Inherent in the provision for federal income taxes are estimates regarding the deductibility of certain items and the realization of certain tax credits. In the event the ultimate deductibility of certain items or the realization of certain tax credits differs from estimates, the Company may be required to change the provision for federal income taxes recorded in the financial statements significantly. Management has used best estimates to establish reserves based on current facts and circumstances regarding tax exposure items where the ultimate deductibility is open to interpretation.

In accordance with guidance specified in the NAIC SAP, the Company utilizes the asset and liability method of accounting for income taxes. Under this method, deferred tax assets (DTA), net of any non-admitted portion and statutory valuation allowance, and deferred tax liabilities are recognized for the future tax consequences attributable to differences between the financial statement carrying amounts of existing assets and liabilities and their respective tax basis. DTAs and liabilities are measured using enacted tax rates expected to apply to taxable income in the years in which those temporary differences are expected to be recovered or settled. The change in deferred taxes, excluding the impact of taxes on unrealized capital gains or losses and nonadmitted deferred taxes, is charged directly to surplus.

**Reinsurance Recoverables.** The Company cedes insurance to other companies in order to limit potential losses and diversify its exposure. Such agreements do not relieve the Company of its primary obligation to the policyholder in the event the reinsurer is unable to meet the obligations it has assumed. The Company monitors the financial condition of reinsurers on an ongoing basis and reviews its reinsurance agreements regularly in an attempt to minimize its exposure to significant losses from reinsurer insolvencies. Reinsurance recoverables include amounts billed to reinsurers on losses paid. Estimates of amounts expected to be recovered from reinsurers that have not yet been paid on losses are estimated in a manner consistent with the claim liability associated with the underlying policy. Such reinsurance recoverables and reserved deductions partially offset claim costs in the Company's statutory statements of operations and are included as an offset to losses and loss expense reserves in the accompanying statutory statements of admitted assets, liabilities and surplus. There were no contracts using deposit accounting as of December 31, 2022 and 2021.

Statutory accounting principles require recognition of a minimum liability for certain unsecured or overdue reinsurance recoverables. As of December 31, 2022 and 2021, the Company had conditional reserves of \$23,630,800 and \$45,974,000, respectively.

## NOTES TO THE FINANCIAL STATEMENTS

In addition, the Company uses the following accounting policies:

1. Short-term investments consist of investments with maturities of twelve months or less at acquisition and are stated at amortized cost, which approximates fair value.
2. Bonds, excluding loan-backed and structured securities, are stated at amortized cost except those with a NAIC designation of "3" through "6" which are stated at the lower of amortized cost or fair value. Amortization of premiums and discounts is calculated using the effective yield method. The Company does not hold any mandatory convertible securities or SVO-identified investments.
3. Unaffiliated common stocks are reported at fair value.
4. Redeemable preferred stocks are stated at amortized cost except those with an NAIC designation of "3" through "6" which are stated at the lower of amortized cost or fair value. Perpetual preferred stocks are stated at fair value except those with an NAIC designation of "3" through "6" which are stated at the lower of amortized cost or fair value.
5. Mortgage loans are carried at the unpaid principal balance adjusted for premiums, discounts, less a valuation allowance. The valuation allowance for mortgage loans reflects management's best estimate of probable credit losses.
6. Loan-backed and structured securities (collectively, loan-backed securities) are stated at amortized cost or the lower of amortized cost or fair value in accordance with the provisions of Statement of Statutory Accounting Principles No. 43-Revised and the Purposes and Procedures Manual of the NAIC Securities Valuation Office. The retrospective adjustment method is used to value loan-backed securities where the collection of all contractual cash flows is probable. For all other loan-backed securities, the Company uses the prospective adjustment method.
7. Investments in subsidiary and affiliated companies are stated as follows:

With the exception of Nationwide Corporation, the admitted investments in all subsidiary, controlled, and affiliated (SCA) entities are valued using an equity method approach. Under this approach, investments in insurance affiliated companies are stated at underlying audited statutory surplus adjusted for unamortized goodwill. Investments in non-insurance affiliated companies that have no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates are stated at audited GAAP equity adjusted to a statutory basis of accounting. Investments in non-insurance affiliated companies that have significant ongoing operations beyond holding assets that are primarily for the direct or indirect benefit or use of the reporting entity or its affiliates are stated at audited GAAP equity. Unaudited affiliated companies of the reporting entity or its affiliates are non-admitted under prescribed SAP accounting practices. Goodwill arising from the acquisition of subsidiaries or affiliated companies is amortized over a period of ten years. Investments in affiliated companies are generally included in stocks. There was no unamortized goodwill at December 31, 2022 and 2021.

8. Other invested assets consist primarily of alternative investments in hedge funds, private equity funds, private and emerging market debt funds, tax credit funds and real estate partnerships. Except for investments in certain tax credit funds, these investments are recorded using the equity method of accounting. Changes in carrying value as a result of the equity method are reflected as net unrealized capital gains and losses as a direct adjustment to surplus. Gains and losses are generally recognized through income at the time of disposal or when operating distributions are received. Partnership interests in tax credit funds are held at amortized cost with amortization charged to investment income over the period in which the tax benefits, primarily credits, are utilized.
9. Refer to Note 8 for the derivative accounting policy.
10. Insurance premiums are generally earned ratably over the policy term. The liability for unearned premiums represents the portion of premiums written relating to the unexpired terms of coverage. Such reserves are computed by pro rata methods for direct business and are based on reports received from ceding companies for reinsurance assumed. Premiums in course of collection represent agent balances and uncollected premiums from policyholders for current policies in force and policy premiums assumed from others, including amounts placed with affiliates. As of December 31, 2022 and 2021, the Company had no liabilities related to premium deficiency reserves. The Company includes anticipated investment income when calculating its premium deficiency reserves, in accordance with SSAP No. 53, Property-Casualty Contracts - Premiums.
11. The Company establishes losses and loss expense reserves for reported claims and claims incurred but not yet reported (IBNR). Estimating the liability for losses and loss expense reserves involves significant judgment and multiple assumptions. Management considers the Company's experience with similar claims, historical trends, economic factors and judicial, legislative and regulatory changes in establishing reserves. The Company's losses and loss expense reserves are recorded net of reinsurance and amounts expected to be received from salvage (the amount recovered from property after the Company pays for a total loss) and subrogation (the right to recover payments from third parties).  
  
Assumptions and estimates for losses and loss expense reserves are updated as new information becomes available. Due to the inherent uncertainty in estimating losses and loss expense reserves, the actual cost of settling claims may differ materially from recorded amounts. Changes in losses and loss expense reserve estimates are included in results of operations in the period the estimates are revised.
12. The Company has a written capitalization policy for prepaid expenses and purchases of items such as electronic data processing equipment, software, furniture, vehicles, other equipment and leasehold improvements. The Company has not modified its capitalization policy from the prior period.
13. Not applicable as the Company does not write major medical insurance with prescription drug coverage.

### **Note 2 – Accounting Changes and Corrections of Errors**

Effective January 1, 2021, the Company adopted revisions to SSAP No. 32R, Preferred Stock (SSAP No. 32R). The adopted revisions updated the definition for redeemable and perpetual preferred stock, and furthermore, updated the valuation classification for perpetual preferred stock to fair value. Previously, perpetual preferred stock could have been valued at amortized cost or fair value based on the rating of the security. Per SSAP No. 32R, any valuation classification changes from amortized cost to fair value are to be recognized in statutory surplus. Going forward, changes to fair value will be recognized as change in net unrealized capital gains and losses in statutory surplus.

During 2022, NLAIC identified and corrected an error as of January 1, 2022 that decreased the Company's investment in Nationwide Corporation and total surplus by \$1,891,542. The decrease to the Company's total surplus in 2022 is reported as a prior period adjustment in aggregate write-ins for gains and losses in surplus.

4. All impaired securities (fair value is less than cost or amortized cost) for which an other-than-temporary impairment has not been recognized in earnings as a realized loss (including securities with a recognized other-than-temporary impairment for non-interest related declines when a non-recognized interest related impairment remains):

- a. The aggregate amount of unrealized losses:

|----|---------------------|-----------------|
| 1. | Less than 12 Months | \$ (67,797,931) |
| 2. | 12 Months or Longer | \$ (49,622,134) |

- b. The aggregate related fair value of securities with unrealized losses:

|    |                     |                |
|----|---------------------|----------------|
| 1. | Less than 12 Months | \$ 744,035,769 |
| 2. | 12 Months or Longer | \$ 341,435,874 |

5. The Company reviews all loan-backed and structured securities in which the fair value of the given security is less than the amortized cost to determine if a given security is other-than-temporarily impaired. The Company examines characteristics of the underlying collateral, such as delinquency and default rates, the quality of the underlying borrower, the type of collateral in the pool, the vintage year of the collateral, subordination levels within the structure of the collateral pool, and the quality of any credit guarantors, to determine the cash flows expected to be received for the security. If the severity and duration of the security's unrealized loss indicates a risk of an other-than-temporary impairment, then the Company will evaluate if the amortized cost basis of the security will be recovered by comparing the present value of the cash flows expected to be received for the given security with the amortized cost basis of the security. If the present value of cash flows is greater than the amortized cost basis of a security, then the security is deemed not to be other-than-temporarily impaired.

**E. Dollar Repurchase Agreements and/or Securities Lending Transactions**

1. The Company's securities lending agreement requires a minimum of 102% of the fair value of loaned securities to be held as collateral. Cash collateral received is invested in short-term investments and reported on the Asset page as Securities Lending Reinvested Collateral assets. The offsetting collateral liability is reported in the Payable for Securities Lending line on the Liabilities page.
2. No assets were pledged as collateral as of year-end.

### G. Reverse Repurchase Agreements Transactions Accounted for as Secured Borrowing

1. To manage short-term liquidity needs within the Nationwide insurance subsidiaries', the Company has agreements to enter into repurchase or reverse repurchase agreements with several authorized affiliated insurance companies. The collateral required meets minimum state specific requirements or statutory requirements if state of domicile does not specify.

As these transactions are with affiliated insurance companies within the Nationwide family and are short-term in nature, the risk of changes in the fair value of the collateral are considered negligible.

For yield enhancement, the Company has agreements to enter into repurchase agreements through its securities lending program with collateral consisting of U.S. Government/Agency securities with investment grade counterparties. The collateral, which is marked to market daily, must represent 102% of the amount loaned and is monitored by the plan's manager in Bank of New York Mellon for changes in fair value.

### **Note 8 - Derivative Instruments**

#### A. Derivatives under SSAP No. 86 – Derivatives

- The Company is exposed to certain risks relating to its ongoing business operations which are managed using derivative instruments. The primary risks managed by using derivative instruments are foreign currency and interest rate risks. The Company uses cross currency swaps and interest rate futures to hedge these risks.

The Company is exposed to credit-related losses in the event of nonperformance by counterparties to financial instruments, but it does not expect any counterparties to fail to meet their obligations given their high credit ratings. Potential losses are minimized through careful evaluation of counterparty credit standing, selection of counterparties from a limited group of high-quality institutions, and collateral agreements.

The cash requirements of a derivative will vary by contract. Cross currency swap notional amounts are typically exchanged in the contracted currencies at both settlement and expiration date. Interest payments are exchanged in the contracted currencies, timing, and amounts. For exchange-traded futures, the broker for the various types of contracts that the Company may employ establishes margin requirements. The margin account is settled daily for movements in market values of open contracts and settlement of closed contracts. The Company uses cash to settle variation margin requirements and either cash or highly liquid securities to settle initial margin requirements.

- Interest Rate Risk Management. The Company uses interest rate futures to reduce and/or alter interest rate exposure arising from mismatches between assets and liabilities. Interest rate futures are based off an underlying security that changes in value as interest rates change. As the value of the underlying referenced security changes, the promise to deliver or cash settle in the future at a fixed price through the futures contract also changes to offset interest rate risks the Company faces.

Foreign currency risk management. As part of its regular investing activities, the Company may purchase foreign currency denominated investments. These investments and the associated income expose the Company to volatility associated with movements in foreign exchange rates. The Company uses cross-currency swaps in effort to mitigate this risk. As foreign exchange rates change, the increase or decrease in the cash flows of the derivative instrument generally offset the changes in the functional-currency equivalent cash flows of the hedged item.

- Periodic cash flows and accruals of income/expense are reported in a manner consistent with the hedged item, generally as investment income. Realized gains and losses on commitment and anticipatory hedges are used to adjust the basis of the hedged item.

Fair value of derivative instruments is determined using various valuation techniques relying predominately on observable market inputs. These inputs include interest rate swap curves, credit spreads, interest rates, counterparty credit risk, equity volatility and equity index levels. In some cases, the Company will utilize non-binding broker quotes to determine fair value.

Derivative instruments used in hedging transactions considered to be effective hedges are valued and reported in a manner consistent with the hedged items (i.e., hedge accounting). Derivative instruments used in hedging transactions that do not meet or no longer meet the criteria of an effective hedge are accounted for at fair value with changes in fair value recorded in surplus as unrealized gains or losses.

- The company currently has no equity options where premium is paid at specified intervals throughout the life of the option.
- No gain or loss recognized in derivative instruments' unrealized gains or losses during the year were excluded from the assessment of hedge effectiveness.
- There is also no net gain or loss recognized during the year resulting from derivatives that no longer qualify for hedge accounting.
- The Company is not currently engaged in written covered options used for income generation or derivatives accounted for as cash flow hedges of a forecasted transaction, other than the payment of variable interest on existing financial instruments.
  - No amounts of gains or losses were classified in unrealized gains/losses related to cash flow hedges that have been discontinued because it was no longer probable that the original forecasted transaction would occur as anticipated.
- The Company has no premium cost due in each of the following four years and thereafter.

## NOTES TO THE FINANCIAL STATEMENTS

### Note 9 – Income Taxes

In August 2022, the Inflation Reduction Act of 2022 (“Act”) was passed by the US Congress and signed into law. The Act includes a new Federal corporate alternative minimum tax (“CAMT”), effective in 2023, that is based on the adjusted financial statement income (“AFSI”) set forth on the applicable financial statement (“AFS”) of an applicable corporation. A corporation is an applicable corporation if its rolling average pre-tax AFSI over three prior years (starting with 2020-2022) is greater than \$1 billion. For a group of related entities, the \$1 billion threshold is determined on a group basis, and the group’s AFS is generally treated as the AFS for all separate taxpayers in the group. Except under limited circumstances, once a corporation is an applicable corporation, it is an applicable corporation in all future years.

An applicable corporation is not automatically subject to a CAMT liability. The corporation’s tentative CAMT liability is equal to 15% of its adjusted AFSI, and CAMT is payable to the extent the tentative CAMT liability exceeds regular corporate income tax. However, any CAMT paid would be indefinitely available as a credit carryover that could reduce future regular tax in excess of CAMT.

The Company comprises a controlled group of corporations and has determined that it likely will be an applicable corporation in 2023. In making such determination, the group has made certain interpretations of, and assumptions regarding, the CAMT provisions of the Act. The US Treasury Department is expected to issue guidance throughout 2023 that may differ from the group’s interpretations and assumptions and that could alter the group’s determination.

In accordance with INT 22-02, the Company did not include an estimate of the impacts of the CAMT because a reasonable estimate cannot be made as of December 31, 2022.

B. Notional amounts of derivative financial instruments significantly exceed the credit risk associated with these instruments and represent contractual balances on which calculations of amounts to be exchanged are based. Credit exposure is limited to the sum of the aggregate fair value of positions that have become favorable to the Company, including accrued interest receivable due from counterparties, net of collateral received.

C. Potential credit losses from derivative counterparties are minimized through careful evaluation of counterparty credit standings, selection of counterparties from a limited group of high quality institutions, collateral agreement and other contract provisions.

D. Collateral requirements for over-the-counter derivative instruments are controlled by the International Swap Dealers Association and Credit Support Annex documents that are negotiated with each counterparty. Generally, these documents outline each party's rights and obligations for receiving and posting collateral. These documents address such issues as calculating collateral due/owed, delivery and return of collateral, uses and substitution for collateral, distributions and interest rights and remedies for both parties, credit thresholds and eligible collateral (typically cash, debt obligations issued by the United States Treasury, or obligations issued by government agencies). The Company monitors their collateral position on a daily basis, adjusting positions as necessary, and in accordance with the terms of these agreements. For future contracts, the broker for the various types of futures contracts that the Company may employ establishes margin requirements. The margin account is settled daily for changes in contracts outstanding and movements in market values of open contracts. The Company uses cash to cover the margin account for future activity.

### Note 17 – Sale, Transfer and Servicing of Financial Assets and Extinguishments of Liabilities

A. Transfers of Receivables Reported as Sales

Not applicable.

B. Transfer and Servicing of Financial Assets

1. The Company has entered into a securities lending agreement with an agent bank whereby eligible securities may be loaned to third parties, primarily major brokerage firms. These transactions are used to generate additional income on the securities portfolio. Loaned securities continue to be reported as invested assets and the Company is entitled to receive any payments of interest or dividends paid on loaned securities. The agreement requires a minimum of 102% of the fair value of loaned securities to be held as collateral. Cash collateral received from borrowers is reflected as a "Payable for securities lending" on the "Statement of Liabilities, Surplus and Other Funds" while non-cash collateral is recorded off-balance sheet. Cash collateral received is reinvested by the agent bank in accordance with the Company's authorized investment policy and included in "Securities lending reinvested collateral assets" in the "Statement of Assets". If the fair value of the reinvested collateral assets is less than the fair value of the securities loaned, the shortfall is non-admitted. Because the borrower or the Company may terminate a securities lending transaction at any time, if loans are terminated in advance of the reinvested collateral asset maturities, the Company would repay its securities lending obligation from operating cash flows or the proceeds of sales from its investment portfolio, which includes significant liquid securities.

The fair value of loaned securities was \$95,031,026 as of December 31, 2022. The Company holds \$69,502,668 of non-cash collateral for loaned securities as of December 31, 2022.

Reinvested collateral assets reported on Schedule DL are excluded from other statutory schedules and disclosures.

See Note 5 E. for additional information concerning securities lending.

2. No servicing assets or liabilities were recognized during the period.

3. No servicing assets or liabilities were recognized during the period.

4. There were no assets securitized during the period.

5. There were no transfers of financial assets accounted for as a secured borrowing (excluding any repurchase and reverse repurchase transactions that may be disclosed under notes 5 F. through 5 I. above).

6. There were no transfers of receivables with recourse.

## NOTES TO THE FINANCIAL STATEMENTS

### C. Wash Sales

Not applicable.

### **Note 19 – Direct Premium Written/Produced by Managing General Agents/Third Party Administrators**

### **Note 20 – Fair Value Measurements**

A. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date. Fair value measurements are based upon observable and unobservable inputs. Observable inputs reflect market data obtained from independent sources while unobservable inputs reflect the Company's view of market assumptions in the absence of observable market information. The Company utilizes valuation techniques that maximize the use of observable inputs and minimize the use of unobservable inputs. In determining fair value, the Company uses various methods including market, income and cost approaches.

The Company categorizes its financial instruments into a three-level hierarchy based on the priority of the inputs to the valuation technique. The fair value hierarchy gives the highest priority to quoted prices in active markets for identical assets or liabilities (Level 1) and the lowest priority to unobservable inputs (Level 3). If the inputs used to measure fair value fall within different levels of the hierarchy, the category level is based on the lowest priority level input that is significant to the fair value measurement of the instrument in its entirety.

The Company categorizes assets and liabilities held at fair value in the statutory statements of assets and liabilities, surplus and other funds as follows:

*Level 1.* Unadjusted quoted prices accessible in active markets for identical assets or liabilities at the measurement date and mutual funds where the value per share (unit) is determined and published daily and is the basis for current transactions.

*Level 2.* Unadjusted quoted prices for similar assets or liabilities in active markets, quoted prices for identical or similar assets or liabilities in markets that are not active or inputs (other than quoted prices) that are observable or that are derived principally from or corroborated by observable market data through correlation or other means. Primary inputs to this valuation technique may include comparative trades, bid/asks, interest rate movements, U.S. Treasury rates, London Interbank Offered Rate, Secured Overnight Financing Rate, prime rates, cash flows, maturity dates, call ability, estimated prepayments and/or underlying collateral values.

*Level 3.* Prices or valuation techniques that require inputs that are both unobservable and significant to the overall fair value measurement. Inputs reflect management's best estimates of the assumptions market participants would use at the measurement date in pricing the asset or liability. Consideration is given to the risk inherent in both the method of valuation and the valuation inputs. Primary inputs to this valuation technique include broker quotes and comparative trades.

The Company reviews its fair value hierarchy classifications for assets and liabilities quarterly. Changes in observability of significant valuation inputs identified during these reviews may trigger reclassifications. Reclassifications are reported as transfers at the beginning of the reporting period in which the change occurs.

Independent pricing services are most often utilized, and compared to pricing from additional sources when available, to determine the fair value of bonds and stocks for which market quotations or quotations on comparable securities or models are used. For these bonds and stocks, the Company obtains the pricing services' methodologies, and classifies the investments accordingly in the fair value hierarchy.

A corporate pricing matrix is used in valuing certain corporate bonds. The corporate pricing matrix was developed using publicly available spreads for certain privately-placed corporate bonds with varying weighted average lives and credit quality ratings. The weighted average life and credit quality rating of a particular bond to be priced using the corporate pricing matrix are important inputs into the model and are used to determine a corresponding spread that is added to the appropriate U.S. Treasury yield to create an estimated market yield for that bond. The estimated market yield and other relevant factors are then used to estimate the fair value of the particular bond.

Non-binding broker quotes are also utilized to determine the fair value of certain bonds when deemed appropriate or when valuations are not available from independent pricing services or a corporate pricing matrix. These bonds are classified with the lowest priority in the fair value hierarchy as only one broker quote is ordinarily obtained, the investment is not traded on an exchange, the pricing is not available to other entities and/or the transaction volume in the same or similar investments has decreased. Inputs used in the development of prices are not provided to the Company by the brokers as the brokers often do not provide the necessary transparency into their quotes and methodologies. At least annually, the Company performs reviews and tests to ensure that quotes are a reasonable estimate of the investments' fair value. Price movements of broker quotes are subject to validation and require approval from the Company's management. Management uses its knowledge of the investment and current market conditions to determine if the price is indicative of the investment's fair value.

The Company carries short-term investments at amortized cost, which approximates fair value.

The fair value of derivative instruments is determined using various valuation techniques relying predominately on observable market inputs. These inputs include interest rate swap curves, credit spreads, interest rates, counterparty credit risk, equity volatility and equity index levels. In cases where observable inputs are not available, the Company will utilize non-binding broker quotes to determine fair value and these instruments are classified accordingly in the fair value hierarchy.

The following table summarizes assets held at fair value as of December 31, 2022:

#### A. Tabular Discounts

Reserves for long-term accident and health claims have been discounted on a tabular basis using the 1987 Commissioner's Group Disability Table (CGDT). The rate used was the maximum interest rate permitted by law in the valuation of a single premium immediate annuity issued on the same date as the claim incurral date, reduced by one hundred basis points (rates used vary from 2.25% to 7.75%). As of December 31, 2022 and 2021, liabilities include \$74,341 and \$99,142 of such discounted reserves, respectively. During 2022, the Company recognized \$3,139 of interest accretion related to tabular discount, which is included within the Statement of Income on Line 2.

31.4 Describe the sources or methods utilized in determining the fair values:

For fixed maturity and marketable equity securities for which market quotations generally are available, Nationwide generally uses independent pricing services to assist in determining the fair value measurement. For certain fixed maturity securities not priced by independent services (generally private placement securities without quoted market prices), an internally developed pricing model or "corporate pricing matrix" is most often used. The corporate pricing matrix is developed by obtaining private spreads versus the U.S. Treasury yield for corporate securities with varying weighted average lives and bond ratings. The weighted average life and bond rating of a particular fixed maturity security to be priced using the corporate matrix are important inputs into the model and are used to determine a corresponding spread that is added to the U.S. Treasury yield to create an estimated market yield for that bond. The estimated market yield and other relevant factors are then used to estimate the fair value of the particular fixed maturity security. Nationwide also utilized broker quotes to assist in pricing securities or to validate modeled prices.

32.3 If the answer to 32.2 is no, describe the reporting entity's process for determining a reliable pricing source for purposes of disclosure of fair value for Schedule D:  
 Nationwide relies on broker valuations only when an approved third-party vendor evaluation is not available. Any exceptions are approved by Risk Management and Middle Office and reviewed by the Investments Pricing Committee. The brokers used to value securities are deemed to be main market makers for each individual security and therefore have in depth knowledge of the particular issue.
