- 2. Fair Value Measurements in (Level 3) of the Fair Value Hierarchy - Not applicable
- 3. Policy on Transfers Into and Out of Level 3

At the end of each reporting period, the Company evaluates whether or not any event has occurred or circumstances have changed that would cause an instrument to be transferred into or out of Level 3.

- 4. Description of Valuation Techniques and Inputs Used in Fair Value Measurement

The fair value of an asset is the amount at which that asset could be bought or sold in a current transaction between willing parties, that is, other than in a forced or liquidation sale. The fair value of a liability is the amount at which that liability could be incurred or settled in a current transaction between willing parties, that is, other than in a forced or liquidation sale.

The calculation of estimated fair values involves considerable judgment. Accordingly, these estimates of fair value are not necessarily indicative of the values that could be negotiated in an actual sale.

The Company's estimates of fair value for financial assets are based on the inputs used in valuation, giving the highest priority to quoted prices in active markets, and require that observable inputs be used in the valuations when available. The disclosure of fair value estimates in the fair value accounting guidance hierarchy is based on whether the significant inputs into the valuation are observable. In determining the level of the hierarchy in which the estimate is disclosed, the highest priority given to unadjusted quoted prices in active markets and the lowest priority to unobservable inputs that reflect the Company's significant market assumptions.

The three levels of the fair value hierarchy are as follows:

Level 1—Observable inputs that reflect unadjusted quoted prices for identical securities in active markets.

Level 2—Inputs include quoted prices for similar assets or liabilities in active markets, quoted prices from those willing to trade in markets that are not active, or other inputs that are observable or can be corroborated by market data for the term of the instrument. Such inputs include market interest rates and volatilities, spreads and yield curves.

STATEMENT AS OF JUNE 30, 2023 OF THE PIE INSURANCE COMPANY

Level 3—Certain inputs are unobservable (supported by little or no market activity) and significant to the fair value measurement. Unobservable inputs reflect the Corporation’s best estimate of what hypothetical market participants would use to determine a transaction price for the asset or liability at the reporting date.
