- (3) The Company’s policy is to recognize transfers in and transfers out of levels at the beginning of each quarterly reporting period.
- (4) The fair value of preferred stock included in Level 2 has been determined by utilizing market observable inputs from third-party pricing services.

Derivative instruments included in Level 2 consist of options. The fair values of these instruments have been determined through the use of third-party pricing services utilizing market observable inputs.

Derivative instruments included in Level 3 consist of options on the Goldman Sachs Multi-Asset Class index and are valued using a valuation model and inputs from outside sources. The models include the Black-Scholes-Merton model for point to point options, spreads and average (SPAV) algorithm model for monthly average options and a Monte Carlo model monthly cap (cliquet) options. The SPAV model is provided by Financial Engineering Associates of Berkley, California.

The assumptions used to determine the fair value of derivatives in Level 3 are derived from outside sources. Bloomberg Investment Services supplies the S&P Index level, the dividend yield and the London Interbank Offering (interest) Rates (LIBOR). Investment banks supply estimates of the implied volatility surface. Other than interpolation of the interest rates and implied volatility rates all inputs are provided by the outside sources.

The following discussion describes the valuation methodologies utilized by the Company for assets and liabilities measured or disclosed at fair value. Fair value estimates are made at a specific point in time, based on available market information and judgments about the financial instrument, including discount rates, estimates of timing, amount of expected future cash flows and the credit standing of the issuer. Such estimates do not consider the tax impact of the realization of unrealized gains or losses. For Level 3 investments, the fair value estimates cannot be substantiated by comparison to independent markets. In addition, the disclosed fair value may not be realized in the immediate settlement of the financial instrument. As described below, certain fair values are determined through the use of third-party pricing services. Management does

STATEMENT AS OF JUNE 30, 2023 OF THE Columbus Life Insurance Company

not adjust prices received from third-parties; however, we do analyze the third-party pricing services’ valuation methodologies and related inputs and perform additional evaluation to determine the appropriate level within the fair value hierarchy. Care should be exercised in deriving conclusions about the Company’s business, its value or financial position based on the fair value information of financial instruments presented below.

Debt Securities, Surplus Notes, and Equity Securities

The fair values of actively traded debt securities, asset/mortgage-backed securities, and surplus notes have been determined through the use of third-party pricing services utilizing market observable inputs. Less liquid private placement securities trading in less liquid or illiquid markets with limited or no pricing information are valued using either broker quotes or by discounting the expected cash flows using current market-consistent rates applicable to the yield, credit quality and maturity of each security.

The fair values of actively traded equity securities and exchange traded funds (including exchange traded funds with debt like characteristics) have been determined utilizing publicly quoted prices obtained from third-party pricing services. The fair values of certain equity securities for which no publicly quoted prices are available have been determined through the use of third-party pricing services utilizing market observable inputs. Actively traded mutual funds are valued using the net asset values of the funds.

Mortgage Loans

The fair values for mortgage loans, consisting principally of commercial real estate loans, are estimated using discounted cash flow analyses, using interest rates currently being offered for similar loans collateralized by properties with similar investment risk. The fair values for mortgage loans in default are established at the lower of the fair value of the underlying collateral less costs to sell or the carrying amount of the loan.

Cash, Cash Equivalents and Short-Term Investments

The fair values of cash, cash equivalents and short-term investments are based on quoted market prices.

Derivative Instruments

The fair values of free-standing derivative instruments, primarily call options, are determined through the use of third-party pricing services utilizing market observable inputs or valuation models incorporating significant unobservable inputs, including projected discounted cash flows, applicable swap curves and implied volatilities.

Securities Lending Reinvested Collateral Assets

The fair value of securities lending reinvested collateral assets are from third-party sources utilizing publicly quoted prices.

Assets Held in Separate Accounts

Assets held in separate accounts include debt securities and mutual funds. The fair values of these assets have been determined using the same methodologies as similar assets held in the general account.

Life and Annuity Reserves for Investment-type Contracts and Deposit Fund Liabilities and Fixed-Indexed Annuity Contracts

The fair value of liabilities for investment-type contracts is based on the present value of estimated liability cash flows. Present values reflect the Company’s margin for uncertainty of the timing of liability cash flows. Key assumptions to the cash flow model include the timing of policyholder withdrawals and the level of interest credited to contract balances.

Fair values for insurance reserves are not required to be disclosed. However, the estimated fair values of all insurance reserves and investment contracts are taken into consideration in the Company’s overall management of interest rate risk.

The fair value of liabilities for fixed indexed annuities is based on embedded derivatives that have been bifurcated from the host contract. The fair value of embedded derivatives is calculated based on actuarial and capital market assumptions reflecting the projected cash flows over the life of the contract and incorporating expected policyholder behavior. The host is adjusted for acquisition costs with revised accretion rates.

Cash Collateral Payable

The payable represents the obligation to return cash collateral the Company has received relating to derivative instruments. The fair value is based upon the stated amount.

Securities Lending Liability

The liability represents the Company’s obligation to return collateral related to securities lending transactions. The liability is short-term in nature and therefore, the fair value of the obligation approximates the carrying amount.

Separate Account Liabilities

Certain separate account liabilities are classified as investment contracts and are carried at an amount equal to the related separate account assets. Carrying value is a reasonable estimate of the fair value as it represents the exit value as evidenced by withdrawal transactions between contract holders and the Company.
