(6) Basis for Loan-Backed Securities and Adjustment Methodology

U.S. government agency loan-backed and structured securities are valued at amortized value. Other loan-backed and structured securities are valued at either amortized value or fair value, depending on many factors including: the type of underlying collateral, whether modeled by an NAIC vendor, whether rated (by either an NAIC approved rating organization or the NAIC Securities Valuation Office), and the relationship of amortized value to par value and amortized value to fair value.

(11) Management's Policies and Methodologies for Estimating Liabilities for Losses and Loss/Claim Adjustment Expenses

Unpaid losses and loss adjustment expenses include an amount determined from individual case estimates and loss reports and an amount, based on past experience, for losses incurred but not reported. There are various methods used to estimate reserves and due to the general volatility, judgement is applied within our methods and selections. Such liabilities are necessarily based on assumptions and estimates and while management believes the amount is adequate, the ultimate liability may be in excess of or less than the amount provided. The methods for making such estimates and for establishing the resulting liability are continually reviewed and any adjustments are reflected in the period determined.

D. Going Concern

In our most recent analysis, the year-end December 31, 2023 cash and invested asset balances, excluding restricted balances pledged as statutory deposits, were compared with the claims payments patterns plus a \$3m annual load for overhead. That analysis shows that the Company has the ability to continue as a going concern beyond one year from the financial statement issuance date. Additionally, the Company is required to maintain a minimum surplus of \$5m to retain its insurance license to facilitate its run-off. While cashflow is one element of going concern, the another is this minimum surplus requirement. The Company continues to work with the Ohio Insurance Department to mitigate the minimum surplus issue with the use of a permitted practice (see Note 1) allowing the company to discount reserves. If the Company experiences adverse development in excess of the permitted practice relief the surplus floor could be breached. It is management's view that this risk is mitigated by its current run-off strategy, but actual results could differ from those used in the analysis.
