These estimates are subjective in nature and involve uncertainties and significant judgement in the interpretation of current market data. Therefore, the fair values presented are not necessarily indicative of amounts the Company could realize or settle currently.

The level in the fair value hierarchy within which fair value measurement in its entirety falls is determined based on the lowest level input that is significant to the fair value measurement in its entirety. The three levels of the hierarchy are as follows:

Level 1: Inputs are unadjusted, quoted prices in active markets for identical assets at the measurement date.

Level 2: Inputs (other than quoted prices included in Level 1 are either directly or indirectly observable for the asset through correlation with market data at the measurement date and for the duration of the instrument’s anticipated life.

Level 3: Unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Unobservable inputs reflect the Company’s own assumptions about the assumptions that market participants would use in pricing the asset or liability at the measurement date.
