The following discussion describes the valuation methodologies utilized by the Company for assets and liabilities measured or disclosed at fair value. Fair value estimates are made at a specific point in time, based on available market information and judgments about the financial instrument, including discount rates, estimates of timing, amount of expected future cash flows and the credit standing of the issuer. Such estimates do not consider the tax impact of the realization of unrealized gains or losses. For Level 3 investments, the fair value estimates cannot be substantiated by comparison to independent markets. In addition, the disclosed fair value may not be realized in the immediate settlement of the financial instrument. As described below, certain fair values are determined through the use of third-party pricing services. Management does not adjust prices received from third-parties; however, we do analyze the third-party pricing services’ valuation methodologies and related inputs and perform additional evaluation to determine the appropriate level within the fair value hierarchy. Care should be exercised in deriving conclusions about the Company’s business, its value or financial position based on the fair value information of financial instruments presented below.

Debt and Equity Securities

The fair values of actively traded debt securities and asset/mortgage-backed securities have been determined through the use of third-party pricing services utilizing market observable inputs. Less liquid private placement securities trading in less liquid or illiquid markets with limited or no pricing information are valued using either broker quotes or by discounting the expected cash flows using current market-consistent rates applicable to the yield, credit quality and maturity of each security.

The fair values of actively traded equity securities and exchange traded funds (including exchange traded funds with debt like characteristics) have been determined utilizing publicly quoted prices obtained from third-party pricing services. The fair values of certain equity securities for which no publicly quoted prices are available have been determined through the use of third-party pricing services utilizing market observable inputs. Actively traded mutual funds are valued using the net asset values of the funds. The fair value of preferred stock included in Level 3 has been determined by either broker quotes or by discounting the expected cash flows using current market-consistent rates applicable to the yield.

Mortgage Loans

The fair values for mortgage loans, consisting principally of commercial real estate loans, are estimated using discounted cash flow analyses, using interest rates currently being offered for similar loans collateralized by properties with similar investment risk. The fair values for mortgage loans in default are established at the lower of the fair value of the underlying collateral less costs to sell or the carrying amount of the loan.

Cash, Cash Equivalents and Short-Term Investments

The fair values of cash, cash equivalents and short-term investments are based on quoted market prices.

Other Invested Assets

Other invested assets includes surplus notes and fixed income residual tranches. The fair values of these assets have been determined using the same methodologies as debt and equity securities. For investments utilizing NAV, see Note 20E for a description.

Derivative Instruments

The fair value of the interest rate swaps and TBA forward contracts have been determined through the use of third-party pricing services utilizing market observable inputs.

Cash Collateral Receivable

The receivable represents the obligation to return cash collateral the Company has posted relating to a bank loan revolver. The fair value is based upon the stated amount.

Assets Held in Separate Accounts

Assets held in separate accounts include debt securities, surplus notes and mutual funds. The fair values of these assets have been determined using the same methodologies as similar assets held in the general account.

Life and Annuity Reserves for Investment-type Contracts and Deposit Fund Liabilities

The fair value of liabilities for investment-type contracts is based on the present value of estimated liability cash flows. Present values reflect the Company’s margin for uncertainty of the timing of liability cash flows. Key assumptions to the cash flow model include the timing of policyholder withdrawals and the level of interest credited to contract balances.

Fair values for insurance reserves are not required to be disclosed. However, the estimated fair values of all insurance reserves and investment contracts are taken into consideration in the Company’s overall management of interest rate risk.

Cash Collateral Payable

The payable represents the obligation to return cash collateral the Company has received relating to derivative instruments. The fair value is based upon the stated amount.

Separate Account Liabilities

Certain separate account liabilities are classified as investment contracts and are carried at an amount equal to the related separate account assets. Carrying value is a reasonable estimate of the fair value as it represents the exit value as evidenced by withdrawal transactions between contract holders and the Company.

Securities Lending Liability

The liability represents the Company’s obligation to return collateral related to securities lending transactions. The liability is short-term in nature and therefore, the fair value of the obligation approximates the carrying amount.

- D. Not applicable.
- E. Investments that use a net asset value (NAV) as a practical expedient consist mainly of fixed income residual tranches. These residual tranches represent equity interests in feeder funds and is stapled to fixed income notes. These investments have to be sold in the same proportion with the note. The NAV for these investments are equal to the fair value reported on Schedule BA Part 1. The Company's unfunded commitment for these investments are \$22.6 million.
